                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acids encoding protein tyrosine kinase sub:types - for identification of new sub:types and treatment of diseases associated with the kinase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          PTK; receptor; protein tyrosine kinase; recombinant; grafting; diagnosis; tumour; skin transplant; connective tissue; tyro-9.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This represents a novel receptor protein tyrosine kinase (PTK) belypeptide subtype tyro-9. The invention provides polynucleotide sequences encoding novel PTK polypeptide subtypes tyro-1 to tyro-13. The PTK subtypes are found expressed predominantly in the brain tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                             Receptor protein tyrosine kinase polypeptide, tyro-3 - preferably expressed in brain tissue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a substantially pure protein(s) or their fragments, comprising a tyrosine kinase domain and a tissue expression pattern having at least one receptor protein-tyrosine kinase subtype. The protein(s) comprises a tyrosine kinase domain and a tissue expression pattern having at least one receptor protein-tyrosine kinase subtype selected from tyro-1, tyro-2, tyro-5, tyro-6, tyro-7, tyro-8, tyro-10, tyro-11 and tyro-12. The protein is useful in assays to screen various compositions which modulate these protein-tyrosine kinase receptors. The presents sequence represents the amino acid sequence of a receptor protein tyrosine kinase tyro subtype
    pattern having at least one receptor protein-tyrosine kinase subtype selected from tyro-1, tyro-2, tyro-4, tyro-5, tyro-6, tyro-7, tyro-8, tyro-10, tyro-11 and tyro-12. The protein is useful in assays to screen various compositions which modulate these protein-tyrosine kinase receptors. The presents sequence represents the amino acid sequence of a receptor protein tyrosine kinase domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel pure protein-tyrosine kinase receptor subtypes useful in assays to screen various compositions which modulate these receptors.
a tyrosine kinase domain and a tissue expression

The protein(s) comprises a tyrosine kinase domain and a tissue expression pattern having at least one receptor protein-tyrosine kinase subtype. The pattern having at least one receptor tyro-5, tyro-6, tyro-7, tyro-8, tyro-10, tyro-11, tyro-12, tyro-4, tyro-5, tyro-6, tyro-7, tyro-8, tyro-10, tyro-11 and tyro- 12. The protein is useful in assays to screen various compositions which modulate these protein-tyrosine kinase receptors. The presents sequence represents the amino acid sequence of a receptor protein tyrosine kinase domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel pure protein-tyrosine kinase receptor subtypes useful in assays to screen various compositions which modulate these receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Residues 592-647 of human fibroblast growth factor receptor 1 (FGFR1).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

Composition for the design or screening of a cytoplasmic Tie2 receptor tyrosine kinase domain modulator, comprises a monoclinic or orthorhombic crystalline form of a cytoplasmic Tie2 receptor tyrosine kinase domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       human Tiez receptor tyrosine kinase domain polypeptide in a monoclinic, or orthorhombic crystalline form. Tiez is an endothelial-specific receptor tyrosine kinase thought to be involved in vascular development. Naturally occuring R849W and Y897S mutations in the Tiez protein have been identified in human s and have been shown to segregate with the autosomal dominant condition vascular dysmorphogenesis. The invention also comprises methods for designing modulators of the biological activity of the cytoplasmic Tiez receptor tyrosine kinase domain is used to design or screen for a modulator of the kinase by rational drug design, using computer models. The present sequence represents residues $59-647, of human fibroblast growth factor receptor I (FGFRI). The catalytic domain of FGFRI closely resembles that of Tie 2 and they share 45 percent sequence identity
               Tie2, Tie2K; human, crystal structure; vascular dysmorphogenesis; protein co-ordinate data; receptor tyrosine kinase; FGFR1; vascular development; fibroblast growth factor receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention relates to the 3 dimensional crystal structure of
                                                                                                                                                                                                                                                                                                                                                       Hassell AM, Holmes WD, Shewchuk LM;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Disclosure, Page 579; 581pp; English.

ABP31047 standard; protein; 68 AA. (first entry) 08-JUL-2002 ABP31047; RESULT 8: ABP31047

Human ORF20 protein, SEQ ID NO:40.

Human; ORF; open reading frame; ORFX; drug screening; diagnosis; disease monitoring; cytokine; cell proliferation; cell differentiation; immune modulation; haematopoiesis regulation; tissue growth; angiogenesis; activin; inhibin; chemotactic; chemokinetic; haemostatic; thrombolytic; tumour inhibition; bodily characteristic; fertility; behaviour; cancer; proliferative disorder; neurological disorder; cardiovascular disease; immune system disorder; organ transplantation; tissue growth disorder; tissue regeneration disorder; disbetes mellitus; hypothyroidism; cholesterol ester storage disease; infection; vulnerary;

Sequences ABP31028-ABP35561 represent 4534 novel human proteins
designated ORF (open reading frame) 1-4534, and sequences ABN75054C designated ORF (open reading frame) 1-4534, and sequences ABN75054ABN79587 represent CDNAs encoding them. The invention also encompasses
CC polypeptides at least 80% identical to the ORFN-ORFW4534 (collectively
CC referred to as ORFX) proteins, polymucleotides at least 85% identical to
the ORFX nucleic carid sequences, vectors and host cells comprising ORFX
CC polypeptides, the recombinant production of ORFX proteins, antibodies
CC splypeptides, methods of screening individuals for a predisposition to an
CORFX-associated disorder. The ORFX proteins of the invention have a wide
CC cativity, and methods of screening individuals for a predisposition to an
CORFX-associated disorder. The ORFX proteins of the invention have a wide
CC call differentiation, immune modulation, hammatopoiesis regulation,
CC chemokinetic activity, haemostatic activity, thrombolytic activity,
CC chemokinetic activity, haemostatic activity, thrombolytic activity,
CC chemokinetic activity, and may also be involved in the determination
of bodily characteristics, fertility and behaviour. ORFX proteins
CC chemokinetic activity, and may also be involved in the determination
of bodily characteristics, fertility and behaviour. ORFX proteins
CC cher proliferative disorders such as psoriasis and benign tumours,
CC cher proliferative disorders such as psoriasis and benign tumours,
CC cher proliferative disorders such as epilepsy and Alzheimer's disease,
CC cradiovascular diseases, immune system disorders and disorders such as epilepsy and Alzheimer's disorders and disorders such as epilepsy and alzheimer's disease,
CC cradiovascular diseases, in the detection of ORFX genomic sequences
CC cradiovascular in the identification and cloning of homologous
CC cradiomatorial in the identification and conding of protein, and in drug screening. The ORFX proteins and mortein acids may additionally be used to proceins and acid p neuroprotective, antiatherosclerotic, anticoagulant, thrombolytic, cardiant, hypotensive, antithyroid, antiinflammatory, immunomodulator, dermatological, analgesic, virucide, antibacterial, fungicide. Novel human polypeptides and polynucleotides useful for diagnosing, preventing and treating cardiovascular disease, neurodegenerative, hyperproliferative disorders and disorders related to organ diagnosis, treatment and monitoring of ORFX-associated diseases vasotropic; antipsoriatic; antidiabetic; cytostatic; nootropic; Claim 10; Page 280; 2508pp; English. 24-MAY-2001; 2001WO-US017076. 24-MAY-2000; 2000US-0206690P. Leach MD, Shimkets RA; (CURA-) CURAGEN CORP. 2002-106200/14. N-PSDB; ABN75073 transplantation Sequence 68 AA; WO200190366-A2. Homo sapiens. 29-NOV-2001,

ABM37932 standard; protein; 84 AA

ABM37932:

```
Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by the creatment, prevention and diagnosis of medical conditions caused by the creatment, prevention and diagnosis of general same associated by the disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting ample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used a antigens in the production of antibodies generally the consequence of presence or acnes indections. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and cativity of P. acnes polypeptides may also be used as
                                                                                                                                                                                                                                                                                                                                                                                             SAPHO syndrome; synovitis; acne; pustulosis; hypertosis; osteomyelitis; uveitis; endophthalmitis; bone; joint; central nervous system; ELISA; inflammatory lesion; acne vulgaris; enzyme linked immunosorbent assay; dermatological; osteopathic; neuroprotectant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            polypeptides and nucleic acids useful for diagnosing infections, especially useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Bhatia A;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Score 23; DB 4; Length 84;

The invention relates to an isolated polymuclectide (ACF64435-ACF64733)

cucoding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polynuclectides (ABM35634-ABM64536) and to immunogenic fragments of P. acnes polypeptides. The invention additionally encompasses expression vectors and host cells comprising a additionally encompasses expression vectors and host cells comprising a colymention; and an isolated T cell population comprising T cells prepared to invention; and an isolated T cell population comprising T cells prepared via this method; a vaccine composition (comprising P. acnes polypeptides, polymentials, antibodies, fusion proteins, T cell populations, or antigen-presenting cells that express the polypeptide; a method and kit for detecting or determining the presence or absence of P. acnes in a patient, and a method for inhibiting the development of P. acnes in a patient, and a method for inhibiting the development of P. acnes in a patient, and a method for inhibiting the development of P. acnes in compositions, T cell populations or antigen-presenting cells that express the polypeptides are useful for diagnosing, preventing or treating acne polypeptides are useful for diagnosing, preventing or treating acne polypeptides are useful for diagnosing, preventing or treating acne controlly protein. The polymuclectides can also be used as probes or primers for nucleic acid hybridisation. The vaccine composition is useful for the sequence represents a polypeptide predicted to be encoded by an ORF (open cadding frame) contained within the P. acnes polymention. Sequence against for the printed specification, but was obtained in electronic format directly from without the printed specification, but was obtained in electronic format directly from protein invention. Bequence and the printed specification, but was obtained in electronic format directly from the printed specification, but was obtained in electronic format directly.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New Propionibacterium acnes polypeptides and polynucleotides encoding the polypeptide, useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Maisonneuve JL;

AAF92502 to AAF92572 represent nucleic acids which encode taste transduction G-protein coupled receptors designated T2R proteins.

AAB87731 to AAB8784 represent T2R proteins, and AAB87925 to AAB87930 represent T2R family consensus sequences from the present invention. The T2R proteins are taste modulators. The nucleic acids are useful as probes for the identification of taste cells, as the nucleic acids are specifically expressed in taste cells. They also serve as tools for the generation of taste topographic maps that elucidate the relationship between the taste cells of the tongue and taste sensory neurons leading to taste centres in the brain. The taste modulators are useful for pharmacological and genetic modulation of taste signalling pathways.

Modulatory compounds comprising T2R proteins can therefore be used in food and pharmacoulogical industries to customise taste, for e.g. to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nucleic acids encoding the T2R family of G-protein coupled taste receptors, useful for identifying taste modulators that can be used in food and pharmaceutical industries to customize taste, for e.g. to decrease the bitter taste of food.
                                                                                                                                                                                                                                                                        Human; rat; mouse; T2R; taste receptor; G-protein coupled receptor; taste transduction G-protein coupled receptor; identification; tongue; taste sensory neuron; taste cell; taste modulator; food; taste signalling pathway.

The invention relates to a novel enterohaemorragic Bscherichia coli 0157:H7-specific nucleic acid molecule. A polynucleotide of the invention has anti-bacterial activity. The polypeptide can be used in detection and/or treatment of 057:H7 infection. The nucleotide sequence of the genome of Enterohaemorragic E coli 0157:H7 was determined. The present sequence represents an E. coli 0157:H7-specific polypeptide of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention is related to a novel method of identifying a compound that modulates the activity of a TIR or T2R taste receptor. The method comprises providing a eukaryotic cell that expresses a functional TIR or T2R taste receptor and a G protein that couples to it, contacting the eukaryotic cell with a compound and identifying whether the compound modulates the activity of TIR or T2R expressed by the eukaryotic cell based on its effect on MARK activity, CAMP accumulation or adenylyl cyclase activity. The method is used to identify a compound that blocks or bitter taste associated with a particular T2R activator or that blocks or chances umami taste elicited by a compound that activates the TIRZ/TIR3 (umami) taste receptor or sweet taste elicited by a compound that activates the TIRZ/TIR3 (sweet) taste receptor. The method is useful in activates the TIRZ/TIR3 (sweet) taste elicited by a compound that compound that activates the activity of a TIR or T2R taste receptor. The present sequence is that of a human T2R taste receptor creceptor. The present sequence is that of a human T2R taste receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Identifying a compound that modulates the activity of a T1R or T2R taste receptor by assaying the effect of the putative modulatory compound on MAPK activation, cAMP accumulation or adenylyl cyclase activity in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                               hyperthermophile Methanopyrus kandleri, the invention also comprises the complete genome from Methanopyrus kandleri. The Methanopyrus kandleri proteins of the invention are useful for enhancing the stability and/or activity of other proteins. The Methanopyrus kandleri genome is useful in a variety of diagnostic and analytical methods. The present amino acid sequence represents a Methanopyrus kandleri protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to Enterococcus faecalis polynucleotides and bolypeptides. The invention also relates to a recombinant expression vector comprising a polynucleotide operably linked to a transcription regulatory element, a cell comprising a recombinant vector, a method for
                                                                                                                                                                                                       New isolated nucleic acids encoding any of about 1700 Methanopyrus kandleri proteins, and the encoded proteins, useful as a medicaments or as diagnostic agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New nucleic acid comprising a sequence encoding an Enterococcus fecalis polypeptide, useful for preparing a composition for diagnosing or treating E. fecalis infection.

This invention describes a novel protein conjugate (I) comprising at least 1 functional region (FR) at any position in the sequence of a carrier protein (II) to form a capaid three-dimensional structure of the Lumazine synthase (LS) type, such that the outer periphery is covalently invention also describes (I) a hetero-oligomeric linked to many FR. The invention also describes (I) a hetero-oligomeric confidence (II) of of at least 1 (I) and at least 1 (II) that lacks FR, with the components optionally covalently linked by chemical treatment; confidence (I) of (I) (4) a DNA (III) that encodes (I); (5) LS from preparation of (I) and (II); that encodes (I); (5) LS from Bacillus subtilis with Cys 33 and/or Cys139 replaced by Ser; (6) DNA (III) encoding LS from Aquifex acolius which is codon-optimized for expression in a recombinant Escherichia coli strain; (7) a chimeric protein (CP) comprising amino acids (aa) 1-60 from is of B. subtilis and a fl.154 from LS of A. acolius for use as (II); and (8) pharmaceutical compositions and vaccines containing (I) and (Ia). The products of the invention have cycostatic, antivixal and antibacterial activity and can be used in a vaccine or for gene therapy. (I) are used as pharmaceuticals
                                                                                                                                                                                                                                                                      ö
producing an E. faecalis polypeptide, an isolated nucleic acid comprising a sequence not given in the specification, a recombinant vector comprising the nucleic acid and a cell comprising the recombinant vector. The polynucleotides can be used to detect the presence of E. faecalis in a sample. The sequences are useful for preparing a composition for diagnosing or treating Enterococcus faecalis infection. This sequence represents an E. faecalis polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Lumazine synthase; capsid; cytostatic; antiviral; antibacterial; vaccine; gene therapy; immunotherapy; biosensor; diagnosis.

ö
              tumors) and in vaccines, including multivalent vaccines, against bacterial or viral infections, to produce diagnostic or therapeutic antibodies, for selections, to produce diagnostic or therapeutic antibodies, and for preparation of protein libraries. (I) may also be used as blosensors and for diagnosis, e.g. of tumors Genes that encode (I) are useful in DNA vaccines and for preparation of plant-based oral vaccines. (I) can contain many FR (same or different) at the surface of a spherical particle (LS comprises 60 subunits that assemble into an icosahedron). The large number of FR may increase sensitivity in immunoassays and the efficiency of immunotherapy agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Bscherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Bseudomonas aeruginosa and Enterococcus facalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify
 for immunotherapy of human immune deficiency virus infection or

The nucleic acid sequence is useful in the detection and/or amplification of nucleic species. The proteins of the invention are useful for related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and cheese. Note: The sequence data for this patent is based on equivalent electronic format directly from WIPO at the production of yogurt and electronic format directly from WIPO at the sequences. (Updated on 29-AUG-2003 to standardise OS field)
            antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antiense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pct_sequences
to express these proteins, and to obtain
                                                                                                                                                                                                                                                             Gape
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            nucleotide seguence useful in the identification or Lactococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Biosynthesis; biodegradation; lactic bacterium; yogurt; cheese.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 3800,

i Sequence 5099, Application US/09583110

j Patent No. 6699703

j Patent No. 699703

j GENERAL INFORMATION:

APPLICANT: Lynn Doucette-Stamm et al.

i TITLE OF INVENTION: Nucleic Acid and Amino Acid Sequences Relating to Streptococcus

i TITLE OF INVENTION: Nucleic Acid and Amino Acid Sequences Relating to Streptococcus

i TITLE OF INVENTION: Number: US/09/583,110

CURRENT APPLICATION NUMBER: US/09/583,110

CURRENT APPLICATION NUMBER: US 60/085,131

PRIOR FILING DATE: 1998-06-30

PRIOR FILING DATE: 1998-06-12

PRIOR FILING DATE: 1998-05-12

PRIOR FILING DATE: 1998-05-12

i PRIOR FILING DATE: 1998-05-12

i RING APPLICATION NUMBER: US 60/051,553

PRIOR FILING DATE: 1998-05-12

i RING FILING DATE: 1998-05-12

i RING APPLICATION NUMBER: US 60/051,553

i RING APPLICATION NUMBER: US 60/051,553

i ENGINE APPLICATION NUMBER: US 60/051,553

Patent No. 6413521
GENERAL INFORMATION:
APPLICANT: MCMICHAEL-PHILLIPS et al.
TITLE OF INVENTION: Helminth Parasite Antigen with
TITLE OF INVENTION: Aminopeptidase-like Activity
NUMBER OF SEQUENCES: 43
CORRESPONDENCE ADDRESS:
ADDRESSEE: Barbara G. Ernet
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           0; Mismatches

Patent No. 6605709

GENERAL INFORMATION:

APPLICANT: GARY BRETON

ITTLE OF INVENTION: UDGLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PROTEUS MIRABIL

ITTLE OF INVENTION: UDGLEIC ACID AND THERAPEUTICS

FILE REPERENCE: 2709.1002-001

CURRENT PELLING DATE: 2000-04-05

PRIOR PELLING DATE: 1999-04-09

NUMBER OF SEQ ID NOS: 8344

SEQ ID NO 7260
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 3800, Application US/09134000C

Sequence 3800, Application US/09134000C

Batent No. 6617156

GENERAL INPORMATION:

Sequence 46, Application US/08456647B

Patent No. 5811516

GENERAL INFORMATION:

APPLICANT: Lemke Ph.D. et al., Greg B.

TITLE OF INVENTION: PROTEIN-TYROSINE KINASE GENES

NUMBER OF SEQUENCES: 54

CORRESPONDENCE ADDRESS:

ADDRESSEE: Fish & Richardson P.C.

STREET: La Jolla
  Sequence 18, Application US/08456647B
Patent No. 5811516

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Patent No. 6610836
GENERAL INFORMATION:
Patent No. 6610836
GENERAL INFORMATION:
APPLICANT: Gary Breton et. al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA
TITLE OF INVENTION: PREGMONIAE FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 2709.2004001
CURRENT APPLICATION NUMBER: US/09/489,039A
CURRENT FILING DATE: 1099-01-29
PRIOR FILING DATE: 1999-01-29
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 47506, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster
TITLE OF INVENTY PAPLICATION NUMBER: US/09/270,767

CURRENT PAPLICATION DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

SOFTWARE: PATENTIN VET. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  RESULT 29
US-00-701-191A-13

iSequence 13, Application US/08701191A

iPatent No. 5942428

GENERAL INFORMATION:

APPLICANT: Moosa Mohammadi, Joseph Schlessinger,

Sequence 8, Application US/09664526

Patent No. 6682921

GENERAL INFORMATION:

APPLICANT: MOHAMMADI, MOOSA

APPLICANT: HUBBARD, STEVAN R.

TITLE OF INVENTION: RECEPTOR TYROSINE KINASE DOMAIN OF NON-INSULIN

TITLE OF INVENTION: RECEPTOR TYROSINE KINASE DOMAIN OF NON-INSULIN

TITLE OF INVENTION: RECEPTOR TYROSINE KINASES

FILE REFERENCE: 038602/0847

CURRENT FILING DATE: 2000-09-18

PRIOR APPLICATION NUMBER: 09/188,809

PRIOR PELLING DATE: 1998-11-09

PRIOR PELLING DATE: 1996-08-21

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 6, Application US/09664526

Sequence 6, Application US/09664526

Sequence 7, Application US/09664526

GENERAL INFORMATION:
APPLICANT: MOTAMMADI, MOOSA

APPLICANT: GCHLESSINGER, JOSEPH
APPLICANT: HUBBARD, STEVAN R.

TITLE OF INVENTION: CRYSTALS OF THE TYROSINE KINASE DOMAIN OF NON-INSULIN
TITLE OF INVENTION: RECEPTOR TYROSINE KINASES

FILE REFERENCE: 038602/0847

CURRENT APPLICATION NUMBER: US/09/664,526

CURRENT PILING DATE: 1998-11-09

PRIOR PLILING DATE: 1998-11-09

PRIOR APPLICATION NUMBER: 08/701,191

PRIOR APPLICATION NUMBER: 08/701,191

SOFTWARE: PATCHILL Ver. 2.1

Sequence 43247, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION:

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster;

FILE REPRENCE: File Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT ELLING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

SOFTWARE: PatentIN Ver. 2.0

SEQ ID NO 43247

LENGTH: 412
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 1818, Application US/09710279

Sequence 7991, Application US/09328352

Patent No. 656298

GENERAL INFORMATION:

APPLICANT: GALY L. Breton et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER

TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION NUMBER: US/09/328,352

CURRENT FILING DATE: 1999-06-04

NUMBER OF SEQ ID NOS: 8252

SEQ ID NO 7991

LENGTH: 613
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

Sequence 7119, Application US/09949016
Patent No. 6812339
GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
FILE REFERENCE: CLOO1307
CURRENT APPLICATION NUMBER: US/09/949,016
CURRENT FILING DATE: 2000-04-14
PRIOR APPLICATION NUMBER: 60/231,755
PRIOR PLING DATE: 2000-10-20
PRIOR APPLICATION NUMBER: 60/237,768
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            79.3%; Score 23; DB 1; Length 769; 57.1%; Pred.
